

Michael Uchekukwu Chiedozie

Software Engineer | Full-Stack Developer | Python, Flutter & React

+234 901 284 8742 | michaelcee2000@gmail.com | linkedin.com/in/michaeluche | github.com/michaeluche01

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of development experience spanning mobile applications, Python backend services, and React web interfaces. Shipped production software to over 10,000 active users, led architectural decisions on a fintech mobile platform, and is currently building Throve, a multi-tenant SaaS inventory management system, end-to-end as a solo project. Comfortable owning work across the full stack: database schema design, REST API development, frontend implementation, and cloud deployment. Brings hands-on experience with Flutter/Dart, Python/FastAPI, React.js, PostgreSQL, and Firebase, and a track record of delivering in Agile teams where ownership and cross-functional collaboration are expected.

TECHNICAL SKILLS

Languages	Python, Dart (Flutter), TypeScript, JavaScript, C#, PHP, HTML5, CSS3
Mobile	Flutter SDK, iOS & Android, Widget Architecture, Custom Animations, State Management
Backend	FastAPI, Django, Flask, REST API Design, JWT Auth, Multi-Tenancy, SQLAlchemy
Frontend	React.js, Next.js (fundamentals), Tailwind CSS, Responsive Design, Redux
Databases	PostgreSQL, MySQL, MongoDB, Firebase, Firestore, SQLite, Alembic migrations
Security	JWT, RBAC, Token Blacklisting, Fraud Detection Logic, SMTP/TLS, Argon2 Hashing
DevOps	Git, Docker, CI/CD, GitHub Actions, Render, Linux/Ubuntu, Postman
Testing	pytest, unittest, Jest, Widget & Integration Testing, TDD, Mocking
Design	Figma, Adobe Photoshop, CorelDraw, UI/UX, Design Systems

WORK EXPERIENCE

Flutter Mobile Engineer | Mehtic Technology Jan 2024 – Jan 2025

- Designed, built, and maintained MehticPay (fintech e-wallet) and Bank Mobile, two production cross-platform applications serving over 10,000 active users on iOS and Android, with full ownership from architecture through store release.
- Implemented clean architecture with Riverpod and Provider state management, separating presentation, domain, and data layers to make the codebase easier to test and extend across a team.
- Integrated payment gateways, cryptocurrency services, airtime top-up, and bill payment APIs, implementing secure adapters and retry logic for each connection.
- Profiled and reduced app load time by diagnosing over-building widget trees and redundant layout calculations using Flutter DevTools.
- Led code reviews, set lint rules and architectural standards, and mentored junior developers, which contributed to a sustained reduction in production bug reports over the project's later months.
- Introduced CI/CD pipeline configurations for automated testing and staged deployments, cutting the manual overhead involved in each release cycle.

React Native Engineer (Contract) | SpecsPay Late 2024

- Built screens and components for a fintech payments app using TypeScript, styled-components/native, Expo Router, and Redux across wallet, transaction, card management, and PIN-secured payment flows.

Freelance Flutter Developer | Bite Express (Client Project) 2024

- Fixed critical production issues on a live multi-vendor food delivery platform. Integrated Paystack-Titan's virtual account API and resolved wallet state bugs and UI layout breakages across Android devices.

IT Support Officer Intern (Hybrid) | ECEWS Apr 2023 – Dec 2023

- Provided IT support across software, hardware, and connectivity issues for staff. Maintained web properties and contributed to internal documentation and user training for technical systems.

Frontend Developer | Reversion.Net Limited

Jan 2022 – Mar 2023

- Built responsive web applications using HTML5, CSS3, JavaScript, and PHP, integrated frontend layouts with backend APIs, and applied performance optimisations that improved load times across client sites.
- Implemented SEO best practices and accessibility compliance, and maintained structured Git workflows across collaborative client projects.

Software Engineer / IT Support | Adaptive Computer Solutions (ACS)

2021 – Present (Remote)

- Developed Yulii, a cross-platform Flutter app now live on both the Google Play Store and Apple App Store, working from conception through deployment.
- Contributed to a SaaS payroll platform and a retail point-of-sale checkout system alongside senior engineers, gaining experience with production software lifecycles early in my career.

KEY PROJECTS

Throve | Python, FastAPI, PostgreSQL, SQLAlchemy, Flutter, React, Docker, JWT

Ongoing solo project

- Architecting a production-grade, multi-tenant SaaS inventory management platform from scratch, covering backend (FastAPI/PostgreSQL), mobile client (Flutter), and web admin dashboard (React).
- Built multi-tenancy with strict data isolation scoped at the ORM layer, JWT authentication with access/refresh token rotation and SHA-256 blacklisting, and 4-tier RBAC (super_admin, owner, manager, staff).
- Engineered a real-time fraud detection engine that scores each stock adjustment from 0 to 100 by analysing quantity anomalies, off-hours patterns, repeat-adjustment clusters, and vague reasons. Flagged operations are held in an approval queue before affecting live inventory.
- Delivered a transactional email system with seven HTML templates covering login alerts, staff-to-owner security forwarding, password resets, welcome credentials, and low-stock digests, sent as non-blocking FastAPI background tasks via SMTP/TLS.

MehticPay | Flutter, MySQL, Firebase

Live on Google Play Store

- Production fintech e-wallet with real-time transfers, crypto management, bill payments, and airtime top-up, serving over 10,000 active users on both iOS and Android.

Yulii | Flutter, PostgreSQL

Live on Google Play Store and Apple App Store

- Cross-platform social productivity and task rewards app with dynamic task delegation, customisable reward systems, and real-time collaboration between users.

EDUCATION

B.Sc. Computer Science, Second Class Upper Division | Ajayi Crowther University, Oyo 2020 – 2024

Relevant coursework: Data Structures & Algorithms, Software Engineering, Artificial Intelligence, Mobile App Development, Operating Systems, OOP, UX/UI, Machine Organisation & Programming

CERTIFICATIONS

- Certificate in Project Management. World Class ICT Solutions, November 2025
- Certificate in Human Resources Management. World Class ICT Solutions, November 2025
- Diploma in Entrepreneurship. Ajayi Crowther University, July 2024
- National Youth Service Corps (NYSC); Nigeria's mandatory post graduation national service, 2025
